

Scenario

2 soccer teams would like to showcase 3 of their star players for the upcoming league match.

It is required that a players **name, surname, age, position, team name** and **goals scored** to be displayed.

Question 1

You are required to create a program to print each players stats to the console.

You are only allowed to create 1 class to solve the above question.

That same class is to run the program.

Use appropriate data types where necessary.

You must provide your own values.

BONUS QUESTIONS

1. Print the total amount of goals scored by each team and print it as a decimal.
2. Then print the goal difference between each team.
